INTRODUCTION

For more than five decades the membership of the American Gynecological Society has included the names of men who have contributed largely to the advancement of Obstetrics and Gynecology. The obligation of the Society to maintain this Roll of Honor in a readily accessible and permanent form has been met by the Album, which contains the biography and photograph of every Active and Honorary Fellow since the Society was founded. The Editor is happy in the thought that he has been privileged to participate in this worthy undertaking.

The first Album was published in 1900 under the direction of Dr. Robert L. Dickinson and the second one in 1918 with Dr. LeRoy Broun as Editor. Were it not for these carefully prepared volumes, the task of this edition would have been well nigh unsurmountable, and grateful acknowledgement is given for the help they have afforded.

I am under deep obligation to my secretary, Miss Etta Jones, whose constant interest and untiring efforts have been largely responsible for this Volume. To Miss Ellen McNichol, I am indebted for the assistance she has given in the reading of proof.

On behalf of the Society, I extend my appreciation to the publisher, Mr. William J. Dornan, and to his Assistant, Mr. John Braun, for their coöperation and helpful suggestions during the preparation of this Volume.

Floyd E. Keene,
Editor.

W. L. A. Lee

WASHINGTON LEE ATLEE, M.D.

Born in Lancaster, Pa., February 22, 1808. Founder. Vice-president, 1876–1877. Honorary Fellow, 1877.

Graduated from Jefferson Medical College, 1829.

Settled in a small village, Mount Joy, near Lancaster, and married Miss A. E. Hoff, of Lancaster. In 1834, removing to Lancaster, he became quickly identified in public matters.

Chair of medical chemistry in medical department, Pennsylvania College in 1844, severing his connection in 1852, from press of private practice. He now devoted much time to surgical matters. Being impressed by the successful removal of both ovaries by his brother, John L. Atlee, in 1843, he made an exhaustive search of the literature, collecting 106 operations and made this the subject of a paper in the *American Journal of the Medical Sciences*, 1845. He submitted to the American Medical Association, in 1853, a competitive prize essay, entitled "The Surgical Treatment of Certain Fibrous Tumors of the Uterus Heretofore Considered beyond the Resources of Art." This essay was one of the two to which the prize was awarded. The last paper on this subject written by him was "The Treatment of Fibroid Tumors of the Uterus," read before the International Medical Congress in 1876.

Dr. Atlee took an active part in the organization of the Philadelphia County Medical Society, the Medical Society of the State of Pennsylvania, and the American Medical Association, of all of which he was at different times president.

Died, 1878.

A. H. FREELAND BARBOUR, M.D., LL.D., F.R.C.P. (Edin.)

Born in 1856. Honorary Fellow, 1921.

Educated in the University of Edinburgh, where he graduated as M.A. in 1875 and B.Sc. in 1877. Two years later took a medical degree and studied at Berlin, Paris, Vienna, and other centers. Returning to Edinburgh, he became a member of the Royal College of Physicians in Edinburgh, and two years later a fellow. He was elected president in 1914.

He became assistant to his brother-in-law, the late Professor A. R. Simpson, before being appointed physician to the Simpson Memorial Royal Maternity Hospital and gynecologist to the Royal Infirmary of Edinburgh.

It is by his publications that he is best known to the medical profession at large. His *Manual of Gynecology*, written in collaboration with the late Berry Hart, was for a quarter of a century a leading British textbook, being translated into French, Italian, Spanish, and finally Chinese. His latest work on *Gynecological Diagnosis and Pathology* was written with Dr. Benjamin P. Watson. His *Atlas on the Sectional Anatomy of Labour* is another well-known book.

He received his LL.D. from the Universities of Edinburgh and Toronto. He was corresponding fellow of the Royal Academy of Medicine of Turin and the Obstetrical Society of Leipzig.

Died, June 11, 1927.

WILLIAM MORSE GRAILY HEWITT, M.D., M.R.C.P.

Born in Bradbury, Wilts, England, in 1828. Honorary Fellow, 1888.

He entered the University of London as a student in arts and medicine in 1846, and became qualified to practice in 1850. In 1852 he opened an office in London, took his M.D. degree in 1855, and became an M.R.C.P. in 1856.

He devoted his attention to surgery for a short period, and then took up pediatrics, upon which subject he wrote extensively. Not until 1858 did he become identified with obstetrics, when he assisted in founding the London Obstetrical Society and became physician to the British Lying-in Asylum in 1859. One year later he began to teach obstetrics, at St. Mary's, in association with Tyler Smith. In 1865 he became professor of midwifery in the University. He was Harveian lecturer in 1878 (subject, "The Mechanical System in Uterine Pathology").

President of the Obstetrical Society in 1869–1870; resigning his university chair to be made emeritus professor in 1886.

He published his famous work, *Diseases of Women*, in 1863.

Died, August 27, 1893.

THOMAS KEITH, M.D., F.R.C.S.

Born in Cyrus, Kincardineshire, Scotland, May 20, 1827. Honorary Fellow, 1888.

He obtained his education at the Universities of Aberdeen and Edinburgh, graduating in medicine at the latter city in 1848. He had already (1845) been an apprentice of Sir James Y. Simpson, and had served a term as house surgeon at the Edinburgh Maternity Hospital.

After graduation he became house surgeon under Syme in the Edinburgh Royal Infirmary, and lived for a time in Italy as an embassy physician. Upon his return to Scotland he began private practice at Edinburgh, and in 1862 did a successful ovariotomy (the second in Scotland). In 1866 he opened a private hospital, and became distinguished as an ovariotomist and hysterectomist. In 1888 he removed his practice to London. He was an F. R. C. S. of Edinburgh, and at one time examiner in clinical surgery for the University. In 1879 he was made surgeon for ovarian diseases to the Royal Infirmary.

Keith was a man of remarkable skill and judgment. He was among the first to recognize and to profit by the teachings of Lister. After becoming known as one of the foremost ovariotomists of his time, and adding to this, that of dealing with solid tumors of the uterus, he became imbued with the teachings of Apostoli in the treatment of fibroids with electricity.

Died, October 5, 1895.

RICHARD BROOKE MAURY, M.D.

Born in Georgetown, D. C., February 5, 1834. Elected to Society, 1883. Council, 1885, 1887, 1907, 1908. Vice-president, 1892, 1901. President, 1906. Honorary Fellow, 1908.

University of Virginia, 1857. University of New York, 1858.

Professor of practice in the Memphis Medical College. Professor of gynecology in the Memphis Hospital Medical College. President of the board of education of the Memphis public schools.

Member of the Southern Surgical and Gynecological Association, British Gynecological Society, Tennessee State Medical Society.

Dr. Maury devoted much of his spare time to civic problems. In 1907 he organized the City Club of Memphis, its object being to eliminate party politics from municipal government. During the five years in which he was president of this club remarkable results were accomplished. A commission form of government for the city was inaugurated, as also the establishment of a Bureau of Municipal Research, which had for its purpose the introduction of business methods in the city administration. Declining to continue as president of the City Club longer than five years, Dr. Maury was made honorary president, May, 1912.

In 1911 Dr. Maury organized the West Tennessee Audubon Society, of which society he was president since its organization, spending much time yearly in lectures to the school children of Memphis on birds, their necessity and economic value. Through Dr. Maury's efforts public sentiment was aroused in West Tennessee for the protection of birds, and the legislature passed laws for their protection. In 1914, through Dr. Maury's efforts, public recreation grounds were established in Memphis by the city government under the control of a recreation commission, of which Dr. Maury was made president.

Having retired from the active practice of surgery, Dr. Maury devoted his entire time to the above civic betterments of Memphis, and in his eighty-third year was closely identified with every movement for the welfare of his home and its citizens. He taught us the art of how to grow old.—(Ed.).

Died, March 17, 1919.

CHARLES PAWLIK, M.D.

Born in Klatorech, Bohemia, March 12, 1849. Honorary Fellow, 1901.

After the gymnasium course in his native town he studied medicine in Vienna, receiving his degree in 1873.

Was assistant at Prof. Gustav Braun's school of midwifery; later first assistant at the University obstetrical and gynecological clinic of Prof. Dr. Karl Braun; later professor, gynecological section of the Vienna Polyclinic. He was director of the Bohemia obstetric-gynecological clinic in Prague. On the death of Prof. Dr. Streng, of Prague University, he was appointed, June 1, 1887, professor of the Bohemian medical faculty, where he taught until his retirement, November 1, 1913.

Prof. Pawlik was master of the German, English, French, Italian, Spanish, Portuguese, Polish and Russian languages, and his ability to speak these fluently, in connection with his well-recognized power as a teacher and operator, drew many students and surgeons to his clinics.

He first demonstrated, in 1890, the complete removal of the bladder for malignant disease with implantation of the ureters into the vagina which at a later time was closed, making it the urine receptacle. Pawlik is credited with priority of direct catheterization of the ureters by reflected light through the urethral speculum, also of treating pyelitis by irrigation through a ureteral catheter. Professor Pawlik's ability as a diagnostician and his keen perception of diagnostic details leading to a final conclusion were noted.

Professor Pawlik died on September 7, 1914.

A. Marion-Sims

J. MARION SIMS, M.D.

Born in Lancaster County, South Carolina, January 25, 1813. Founder. President, 1880.

A.B., South Carolina College, 1832. Studied medicine for a time at Charleston, S. C., and later obtained his M.D. from Jefferson Medical College in 1835.

Practised for a short time at Lancaster, S. C., but in 1835 went to Mount Meigs, Alabama. In 1840, located in Montgomery, Alabama. In 1841 he began to successfully perform the then new operations for cross-eyes and club-feet. From this beginning he soon established a large surgical practice. In 1853, after he had devised his instruments and technic for vesicovaginal fistulæ, he moved to New York. In 1855 he founded the Woman's Hospital and was surgeon-in-chief until 1862, when he went abroad to take up his residence. While in Europe he was kept busy demonstrating his technic for vesicovaginal fistula, and his operation for dysmenorrhea and sterility. Soon honors and riches were bestowed upon him and he received many decorations.

It was during his stay abroad that he published, in 1866, his only medical book, which was entitled *Uterine Surgery*. In 1870 he was surgeon-in-chief of the Anglo-American Ambulance in the Franco-Prussian War. In 1871 he returned to New York, and from 1872 to his retirement to private practice, in 1874, he was surgeon to the Woman's Hospital.

In 1875 he was president of the American Medical Association.

ALFRED BAKER SPALDING, B.A., M.D.

Born, Atchison, Kansas, July 19, 1874. Elected to Society, 1918. Vice-president, 1928. Active Fellow.

Educated at Michigan Military Academy, 1892. and Stanford University (B.A.), 1896. Graduated from the Columbia University Medical School in 1900.

Interne, General Memorial Hospital. Assistant resident obstetrician at the Sloane Maternity Hospital. Instructor in obstetrics, University of California, in 1902, and continued as director of this department due to the sudden death of the professor of obstetrics. In 1905, assistant professor, and professor of Obstetrics, 1909–1912. During his service at the University of California, there were no clinical facilities available for the practical instruction of students in obstetrics, except for a few beds at the County Hospital. Many students were graduated without ever attending a patient in childbirth, and to meet this condition Dr. Spalding organized the San Francisco Maternity in 1904. This Society raised the funds for the teaching of practical obstetrics in San Francisco for ten years. In 1912 the San Francisco Maternity was merged with the Women's Clinic of Stanford University Medical School. In 1911 studied gynecological pathology under Professor Pick in Berlin and Dr. Oscar Frankl in Vienna. Professor of obstetrics and gynecology Medical School of Stanford University, 1912 to the present time. Consultant in obstetrics and gynecology, San Francisco, Hospital. HERBERT RITCHIE SPENCER, M.D., B.S. (Lond.), F.R.C.P.

Born in Atherstone, Warwickshire, England, January 16, 1860. Second son of the late Henry Spencer, of Atherstone. Honorary Fellow, 1909.

Educated at Atherstone grammar school and University College, London.

Professor of obstetric medicine, University College Hospital Medical School, London, since 1893. Obstetric physician to University College Hospital 1887 to 1925. Late examiner in midwifery and diseases of women in Universities of Oxford, Cambridge and London, and for Royal College of Physicians.

President of Section of History of Medicine, of late president of Section of Obstetrics and Gynecology, Royal Society of Medicine; late president of the Obstetrical Society of London.

Has published (conjointly) catalogue of the obstetrical and gynecological specimens in the museum of University College Hospital (1911) numerous papers of midwifery and diseases of women; "History of British Midwifery from 1650 to 1800;" "Caesarean Section;" "The Rennaissance of Midwifery;" "Harveian Oration" (1921); "Tumors Complicating Pregnancy," etc.

Has practised and advocated high amputation and hysterectomy by the cautery (especially the galvano-cautery) for early squamous carcinoma of cervix for many years, reserving the extended abdominal hysterectomy for more advanced cases and for cases of columnar-cell carcinoma. Abandoned subtotal hysterectomy thirty years ago in favor of total hysterectomy for myoma; has on many occasions pointed out the superiority of the latter operation. Retired from practice 1927.

Is fond of shooting, fishing, traveling and ornithology.

LAWSON TAIT, F.R.C.S. (Eng. and Edin.)

Born in Edinburgh in 1845. Honorary Fellow, 1882.

Early education at Heriot's Hospital School and later a student of medicine at the University. Qualified in 1866 as L.R.C.S., Edin.; in 1870, F.R.C.S., Edin., and in 1871, F.R.C.S., Eng.

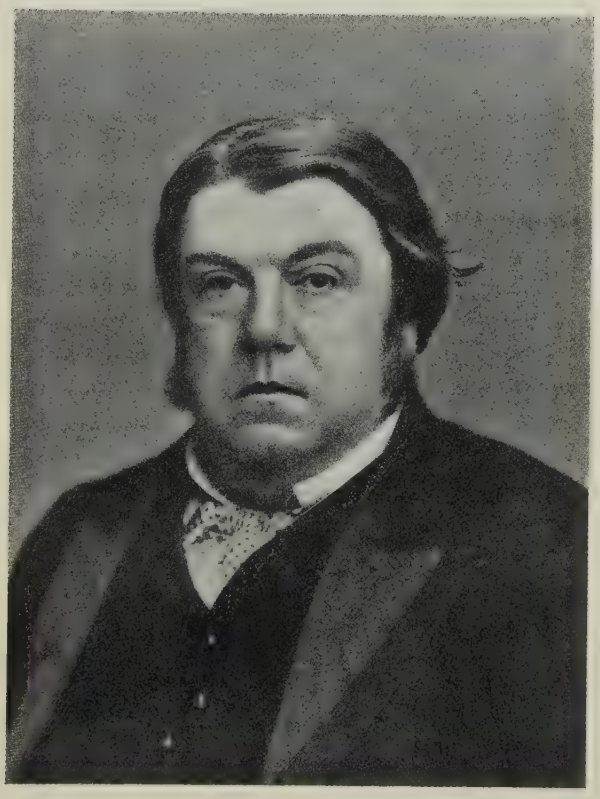
Interne for three years in the hospital at Wakefield. In 1870, located at Birmingham. Active in the establishment of the Birmingham Hospital for Women, to which he was appointed the first surgeon.

In 1873, published a work on *Diseases of the Ovaries*, and in 1879 a treatise on *Diseases of Women*. In 1894 he published a paper entitled, "A General Summary of Conclusions from Four Thousand Cases of Abdominal Section."

He became an unusually successful abdominal surgeon. In 1883 he performed the first successful operation for ruptured tubal pregnancy. In 1879 Tait excised the normal ovaries, along the lines laid down by Battey, but claimed that in none of his cases were the uterine appendages normal. This, with the similar operation of Alfred Hegar, developed, says Kelly, "the whole field of pelvic operations for diseases of the organs other than gross ovaries and fibroid tumors."

In 1881 he devised the special operation for excision of the uterine appendages by securing the pedicle with a silk ligature, tied by means which originated with him—the "Staffordshire knot."

Died, June 13, 1899.



Lawson Tait

S. TARNIER, M.D.

Born in Dijon, France, April 26, 1828. Honorary Fellow, 1881.

Educated at the Lycée, 1846–1848.

He was an interne in the hospitals at Paris from 1850–1853. In 1856 he became interne at the Maternité under Paul Dubois. Here he obtained his love for obstetrical art.

At this time at the Maternité puerperal fever was frequent, causing 64 deaths out of 347 confinements in forty days. Tarnier comparing this death-rate of 1 in 19 with 1 in 382 confinements out of the hospital, concluded that puerperal fever was contageous and due to overcrowding, and presented, April 17, 1857, his inaugural thesis for the Academy on "Recherches sur l'Etat puerperale et les Maladies des Femmes en Couches." The criticisms were severe. After occupying various positions he became surgeon-in-chief to the Maternité in 1867. It was here that he demonstrated the underlying cause of puerperal fever. When he entered the Maternité as an interne the death-rate was 1 in 19. Under his term as master he eventually had one thousand women confined without a death. In 1889 he succeeded Pajot as clinical professor of obstetrics.

The axis-traction forceps of Tarnier are recognized in all obstetrical hospitals.

He was worshipped by his patients, and his pupils loved him.

Died, 1897.

JOHN KNOWSLEY THORNTON, M.B., C.M. (EDIN.)

Born in Northampton, January 15, 1845. Honorary Fellow, 1882.

Educated at Rossall School. At twenty-two years of age entered as a student of medicine at the University of Edinburgh, graduating in 1871.

He then filled the appointment of house surgeon to Lord Lister at the Royal Infirmary, Edinburgh. After a few months of private practice at Ford, near the Scottish border, he was appointed, in 1873, assistant surgeon to the Samaritan Free Hospital, London, and also became private assistant to Sir Spencer Wells. Within a few years he became full surgeon to the Samaritan Free Hospital, which position he held until 1891, resigning on account of health and the demands of practice.

Knowsley Thornton was a pioneer in ovariotomy, but soon began to play a leading part in surgery of the upper abdomen. He improved the technic of hysterectomy for uterine fibroids and succeeded by his example in the operating theatre in ultimately reducing nephrectomy, cholecystotomy and splenectomy to the level of routine surgical procedures. In 1896, because of illness, he retired from private practice and lived at his estate, Hildersham Hall, near Cambridge.

Died, January 3, 1904.
